Plagiarism Report Content

Linux is an open-source operating system (OS) based on the Unix architecture, first developed by Linus Torvalds in 1991. It is known for its flexibility, security, and stability, making it a popular choice for servers, desktops, and embedded systems. Unlike proprietary OSes, Linux allows users to modify and distribute its source code. It is supported by a large community of developers who contribute to various distributions (distros) like Ubuntu, Fedora, and Debian. Linux offers robust performance, multitasking, and network capabilities, and is widely used in web hosting, programming, and system administration due to its efficiency and open-source nature.
